## **CLAIMS**

A radiation curable composition comprising radiation curable components wherein at least one component contains a functional group which, when attached to an acrylate group has a calculated Boltzmann average dipole moment of greater than 3.5 Debye, excluding the components 2,3-carbonyldioxypropyl 2-(meth)acryloyloxyethyl carbonate, 3,4-carbonyldioxybutyl 2-(meth)acryloyloxyethyl carbonate, 5,6-carbonyldioxyhexyl 2-(meth)acryloyloxyethyl, the acrylate of beta-hydroxyethyloxazolidone and 2-oxo-1,3-dioxolan-4-yl-methyl acrylate.

The radiation curable composition of claim 1, wherein the components

The radiation curable composition of claim 1, wherein the components comprise

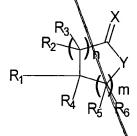

A a radiation curable oligomer (A) and

B a diluent (B)

The radiation curable composition of claim 2, wherein the diluent (B) is a reactive diluent (B).

The radiation ourable composition according to anyone of claims 1-3, wherein the functional group, when attached to an acrylate group, has a Boltzmann average dipole moment of higher than 4.5, Debye.

The radiation curable composition according to anyone of claims 1-4, wherein one or more components are present that are chosen from the group consisting of lactones (C1) according to the formula (1):

(1)

wherein R<sub>1</sub> = organic group with a molecular weight between 40 and 20000; R<sub>2</sub>,R<sub>3</sub>,R<sub>4</sub>,R<sub>5</sub>,R<sub>6</sub> and R<sub>7</sub> are independently of each other H, an alkyl group having 1-20 C atoms, wherein the alkylgroup can be linear, branched or cyclic and may contain beteroatoms like =N, O, S and P; X is an oxygen or sulfur atom; Y is an oxygen or sulfur atom or an NR<sub>7</sub>-group; n is 0-4; m is 0-4 and n+m =1-4;

or cyclic carbonates (C2) according to formula (2):

$$R_{1} \xrightarrow{R_{2}} R_{6}^{R_{3}} \xrightarrow{N} X$$

$$R_{5} \xrightarrow{R_{6}} R_{6}^{m}$$

$$(7)$$

wherein  $R_1$  = organic group with a molecular weight between 40 and 20000;  $R_2$ ,  $R_3$ ,  $R_4$ ,  $R_5$ ,  $R_6$  and  $R_7$  are independently of each other H, an alkyl group having 1-20 C atoms, wherein the alkylgroup can be linear, branched or cyclic and may contain heteroatoms like =N, O, S and P or an arylgroup having from 6-20 C-atoms; W, X, Y and Z are independently an oxygen or sulfur atom or an NR<sub>7</sub>-group with the proviso that W and X are not both an NR<sub>7</sub>-group at the same time; n is 1-4; or a compound (C8) according to the formula (8):

$$R_1 - P \left( \begin{array}{c} Y \\ Z \end{array} \right) R_3$$
 (8)

wherein  $R_1$  = organic group with a molecular weight between 40 and 20000;  $R_2$ , $R_3$ , and  $R_7$  are independently of each other H, an alkyl group having 1-20 C atoms, wherein the alkylgroup can be linear, branched or cyclic and may contain heteroatoms like =N, O, S and P or an arylgroup having from 6-20 C-atoms; X is an oxygen or sulfur atom; Y and Z are independently an oxygen or sulfur atom or an NR<sub>7</sub>-group; n is 1-4; or a compound (C9) according to the formula (9):

$$R_1$$
  $R_2$   $R_3$   $R_3$ 

wherein  $R_1$  = organic group with a molecular weight between 40 and 20000;  $R_2$ ,  $R_3$ , and  $R_7$  are independently of each other H, an alkyl group having 1-20 C atoms, wherein the alkylgroup can be linear, branched or cyclic and may contain heteroatoms like =N, O, S and P or an arylgroup having from 6-20 C-atoms; X is an oxygen or sulfur atom; Y is an oxygen or sulfur atom or an NR<sub>7</sub>-group; n is 1-4.

(9)

The radiation curable composition according to claim 5, wherein at least one of the  $R_1$  to  $R_7$  groups contains a radiation curable functional group.

The radiation curable composition according to any of claims 2-6, wherein the radiation curable oligomer (A) or diluent (B) comprises a NH-or OH-group.

The radiation durable composition according to claim 7, wherein  $R_1$  comprises an NN-group.

The radiation curable composition according to any of claims 1-8, wherein the component that contains a functional group also has a radiation curable functional group selected from the group consisting of methacrylate, acrylate, vinylether, fumarate, maleate, itaconate, oxolane or epoxy group.

The radiation curable composition according to claim 9, wherein the radiation curable functional group is a methacrylate or an acrylate group. The radiation curable composition according to anyone of claims 1-10, wherein a radiation curable diluent is present, which is a compound according to the formula (10):

$$\begin{array}{c|c}
 & O \\
 & O \\$$

wherein  $R_{11}$ = H or Me,  $R_{12}$ = organic group having 1-20 C-atoms and  $R_{13}$

is a heterocyclic group of which the corresponding alcohol has a calculated Boltzmann average dipole moment of > 2.5 Debye.

The radiation curable composition according to anyone of claims 1-11, wherein a radiation curable diluent is present, which is a compound according to the formula (11):

wherein  $R_{21}$ = H or Me,  $R_{22}$  = organic group having 1-20 C-atoms,  $R_{23}$  = organic group having 1-20 C atoms and  $R_{24}$  is a heterocyclic group of which the corresponding alcohol has a calculated Boltzmann average dipole moment of > 2.5 Debye.

The radiation curable composition according to anyone of claims 1-12, wherein a radiation curable component is present according to the formula (12):

wherein  $R_{31}$ = H or Me,  $R_{32}$ ,  $R_{33}$  and  $R_{34}$  = are independently an organic group having 1-20 C atoms, E oligomer or polymer with a molecular weight between 100 and 100000, X and Y are independently oxygen, sulphur or a  $NR_7$ -group, and  $R_{35}$  is a heterocyclic group of which the corresponding alcohol has a calculated Boltzmann average dipolemoment of > 2.5 Debye.

The radiation curable composition according to claim 13, wherein E has a molecular weight between 500 and 10000.

The radiation curable composition according to any one of claims 1-14, wherein the component that contains a functional group which, when

attached to an acrylate group, has a calculated Boltzmann average dipole moment of greater than 3.5 Debye or the component containing a heterocyclic group of which the corresponding alcohol has a calculated Boltzmann average dipole moment of greater than 2.5 Debye is present in an amount of at least about 3 wt.% relative to the total amount of components in the composition. The radiation curable composition of claim 15, wherein the component that contains a functional group or the component that contains a heterocyclic group is present in an amount of at least about 5 wt.% relative to the total amount of components in the composition. A process for preparation of the radiation curable compounds as defined in any one of claims 5-14, by reacting together (i) an hydroxy-\thiol- or NH-functional (meth)acrylate, (ii) a di-or more functional isocyanate, and (iii) an hydroxy-, thiol- or NH-functional compound having a calculated Boltzmann average dipole moment of greater than 2.5 Debye. A process for preparation of the radiation curable monomers as defined in any one of claims 5-14, by reacting together (i) an hydroxy functional (meth)acrylate, (ii) a di-functional isocvanate, and (iii) a hydroxy functional compound having a calculated Boltzmann average dipole moment of greater than 2.5 Debye. A process for preparation of the radiation curable monomers according to any of claims 5 to 14, by reacting together (i) one equivalent of an hydroxy functional (meth)acrylate, (ii) two equivalents of a di-functional isocyanate, (iii) one equivalent of a diamine, dihydroxy or dithiol functional compound with a molecular weigth Mn of 1000 or less, and (iv) one equivalent of an hydroxy functional compound having a calculated Boltzmann average dipole moment of greater than 2.5 Debye. A process for preparation of the radiation curable oligomer according to any of claims 5 to 14, by reacting together (i) one equivalent of an hydroxy functional (meth)acrylate,

(ii) two equivalents of a di-functional isocyanate,

(iii) one equivalent of a diamine, dihydloxy or dithiol functional compound

with a moledular weigth Mn of greater than 1000, and

(iv) one equivalent of an hydroxy functional compound having a calculated Boltzmann average dipole moment of greater than 2.5 Debye.

A process for preparation of the radiation curable oligomer according to any of claims 5 to 14, by reacting

- (i) an hydroxy functional (meth)acrylate,
- (ii) a tri-or more functional isocyanate,
- (iii) an hydroxy functional compound having a calculated Boltzmann average dipole moment of greater than 2.5 Debye together, and
- (iv) an hydroxy or amine functional oligomer with an average hydroxy or amine functionality greater than 1.5.

Use of radiation curable compositions as defined in claims 1-16 in coatings, adhesives, in s.

Use of a radiation curable composition comprising

a a radiation curable oligomer (A)

b a diluent (B)

as a coating for glass fibers wherein the radiation curable composition contains a component having a functional group which has a calculated Boltzmann average dipole moment of higher than 2.5 Debye.

Use of the radiation curable composition as defined in anyone of claims 1- 16 for coating of glass fibers.

Use of a radiation curable composition comprising

a a radiation curable oligomer (A)

b a diluent (B)

in stereolithography wherein the radiation curable composition contains a component having a functional group which has a calculated Boltzmann average dipole moment of higher than 2.5 Debye:

A radiation curable optical fiber primary coating composition comprising

- a a radiation curable oligomer (A)
- b a reactive diluent (B)
- c optionally a photoinitiator (D)

wherein the radiation curable primary coating composition has a dielectric constant of greater than 6.5.
